

## Schedule 29

## Special purpose foods

**Note 1** This instrument is a standard under the *Food Standards Australia New Zealand Act 1991* (Cth). The standards together make up the *Australia New Zealand Food Standards Code*. See also section 1.1.1—3.

Special purpose foods are regulated by Part 9 of Chapter 2, which contains Standard 2.9.1, Standard 2.9.2, Standard 2.9.3, Standard 2.9.4, Standard 2.9.5 and Standard 2.9.6. This Standard prescribes information for these standards.

**Note 2** The provisions of the Code that apply in New Zealand are incorporated in, or adopted under, the *Food Act 2014* (NZ). See also section 1.1.1—3.

### S29—1 Name

This Standard is *Australia New Zealand Food Standards Code – Schedule 29 – Special purpose foods*.

**Note** Commencement:

This Standard commences on 1 March 2016, being the date specified as the commencement date in notices in the *Gazette* and the New Zealand Gazette under section 92 of the *Food Standards Australia New Zealand Act 1991* (Cth). See also section 93 of that Act.

### S29—2 Infant formula products—calculation of energy content

- (1) For paragraph 2.9.1—4(2)(a), the energy content of infant formula product must be calculated using:
  - (a) the energy contributions of the following \*components only:
    - (i) fat; and
    - (ii) protein; and
    - (iii) carbohydrate; and
  - (b) the relevant energy factors set out in section S11—2.
- (2) The energy content of an infant formula product must be expressed in kilojoules.

### S29—2A Infant formula products—calculation of protein content

For paragraph 2.9.1—4(2)(b), the protein content of infant formula product must be calculated by multiplying the nitrogen content of the product by a nitrogen-to-protein conversion factor of 6.25.

### S29—2B Infant formula products—calculation of vitamin A content

For paragraph 2.9.1—4(2)(c), the vitamin A content of infant formula products must be calculated using only the retinol forms of vitamin A prescribed in Column 1 of Table S29—23.

### S29—3 Infant formula products—L-amino acids that must be present

For subsection 2.9.1—6(5) and section 2.9.1—33, the table is:

**L-amino acids that must be present in infant formula products**

| <i>L-amino acid</i> | <i>Minimum amount per 100 kJ</i> |
|---------------------|----------------------------------|
| Cysteine            | 9 mg                             |
| Histidine           | 10 mg                            |
| Isoleucine          | 22 mg                            |
| Leucine             | 40 mg                            |
| Lysine              | 27 mg                            |
| Methionine          | 6 mg                             |
| Phenylalanine       | 19 mg                            |
| Threonine           | 18 mg                            |

| <i>L-amino acid</i> | <i>Minimum amount per 100 kJ</i> |
|---------------------|----------------------------------|
| Tryptophan          | 8 mg                             |
| Tyrosine            | 18 mg                            |
| Valine              | 22 mg                            |

#### **S29—4 Infant formula products—limits on fatty acids**

For paragraphs 2.9.1—7(1)(g) and 2.9.1—34(1)(g), the table is:

##### **Limits on fatty acids that may be present in infant formula products**

| <i>Column 1</i>                | <i>Column 2</i>                           |
|--------------------------------|-------------------------------------------|
| <i>Substance</i>               | <i>Maximum amount per 100 kJ</i>          |
| Docosahexaenoic acid           | 12 mg                                     |
| Total <i>trans</i> fatty acids | Not more than 4% of the total fatty acids |
| Erucic acid (22:1)             | Not more than 1% of the total fatty acids |

#### **S29—5 Vitamins, minerals, electrolytes and other substances required in infant formula and special medical purpose product for infants**

For sections 2.9.1—7(2)(b)(i), 2.9.1—8(1), 2.9.1—34(2)(b) and 2.9.1—36(1), the table is:

##### **Vitamins, minerals, electrolytes and other nutritive substances required in infant formula and special medical purpose product for infants**

| <i>Column 1</i>         | <i>Column 2</i>                  | <i>Column 3</i>                  | <i>Column 4</i>                                   |
|-------------------------|----------------------------------|----------------------------------|---------------------------------------------------|
| <i>Substance</i>        | <i>Minimum amount per 100 kJ</i> | <i>Maximum amount per 100 kJ</i> | <i>Guidance upper level per 100 kJ (see Note)</i> |
| <b>Vitamins</b>         |                                  |                                  |                                                   |
| Vitamin A               | 14 µg RE                         | 43 µg RE                         |                                                   |
| Vitamin D               | 0.24 µg                          | 0.63 µg                          |                                                   |
| Vitamin C               | 1.7 mg                           |                                  | 17 mg                                             |
| Thiamin                 | 10 µg                            |                                  | 72 µg                                             |
| Riboflavin              | 14.3 µg                          |                                  | 120 µg                                            |
| Niacin                  | 72 µg                            |                                  | 359 µg                                            |
| Vitamin B <sub>6</sub>  | 8 µg                             |                                  | 42 µg                                             |
| Folic acid              | 2.4 µg                           |                                  | 12 µg                                             |
| Pantothenic acid        | 96 µg                            |                                  | 478 µg                                            |
| Vitamin B <sub>12</sub> | 0.02 µg                          |                                  | 0.36 µg                                           |
| Biotin                  | 0.24 µg                          |                                  | 2.4 µg                                            |
| Vitamin E               | 0.14 mg α-TE                     |                                  | 1.2 mg α-TE                                       |
| Vitamin K               | 0.24 µg                          |                                  | 6 µg                                              |
| <b>Minerals</b>         |                                  |                                  |                                                   |
| Calcium                 | 12 mg                            |                                  | 35 mg                                             |
| Phosphorus              | 6 mg                             |                                  | 24 mg                                             |

| <b>Column 1</b>                   | <b>Column 2</b>                  | <b>Column 3</b>                  | <b>Column 4</b>                                   |
|-----------------------------------|----------------------------------|----------------------------------|---------------------------------------------------|
| <i>Substance</i>                  | <i>Minimum amount per 100 kJ</i> | <i>Maximum amount per 100 kJ</i> | <i>Guidance upper level per 100 kJ (see Note)</i> |
| Magnesium                         | 1.2 mg                           |                                  | 3.6 mg                                            |
| Iron                              | 0.14 mg                          | 0.48 mg                          |                                                   |
| Iodine                            | 2.4 µg                           |                                  | 14 µg                                             |
| Copper                            | 8 µg                             |                                  | 29 µg                                             |
| Zinc                              | 0.12 mg                          |                                  | 0.36 mg                                           |
| Manganese                         | 0.24 µg                          |                                  | 24 µg                                             |
| Selenium                          | 0.48 µg                          |                                  | 2.2 µg                                            |
| <b>Electrolytes</b>               |                                  |                                  |                                                   |
| Chloride                          | 12 mg                            | 38 mg                            |                                                   |
| Sodium                            | 4.8 mg                           | 14 mg                            |                                                   |
| Potassium                         | 14 mg                            | 43 mg                            |                                                   |
| <b>Other essential substances</b> |                                  |                                  |                                                   |
| Choline                           | 1.7 mg                           |                                  | 12 mg                                             |
| L-carnitine                       | 0.3 mg                           |                                  | 0.8 mg                                            |
| Inositol                          | 1 mg                             |                                  | 10 mg                                             |

**Note** It is recommended that infant formula and a special medical purpose product for infants contain a substance listed in Column 1 of the table in an amount that is not more than the amount (if any) specified for that substance in Column 4 of the table. The amounts specified in Column 4 are Guidance Upper Levels and are recommended upper levels for nutrients which pose no significant risks on the basis of current scientific knowledge. These levels are values derived on the basis of meeting nutritional requirements of infants and an established history of apparent safe use. These Guidance Upper Levels should not be exceeded unless higher nutrient levels cannot be avoided due to high or variable contents in constituents of infant formulas or special medical purpose product for infants; or due to technological reasons.

## S29—6

### Vitamins, minerals and electrolytes required in follow-on formula

For subparagraph 2.9.1—7(2)(b)(ii) and subsection 2.9.1—8(2), the table is:

#### Vitamins, minerals and electrolytes required in follow-on formula

| <b>Column 1</b>                        | <b>Column 2</b>                  | <b>Column 3</b>                  | <b>Column 4</b>                                   |
|----------------------------------------|----------------------------------|----------------------------------|---------------------------------------------------|
| <i>Vitamin, mineral or electrolyte</i> | <i>Minimum amount per 100 kJ</i> | <i>Maximum amount per 100 kJ</i> | <i>Guidance upper level per 100 kJ (see Note)</i> |
| <b>Vitamins</b>                        |                                  |                                  |                                                   |
| Vitamin A                              | 14 µg RE                         | 43 µg RE                         |                                                   |
| Vitamin D                              | 0.24 µg                          | 0.72 µg                          |                                                   |
| Vitamin C                              | 1.7 mg                           |                                  | 17 mg                                             |
| Thiamin                                | 10 µg                            |                                  | 72 µg                                             |
| Riboflavin                             | 14.3 µg                          |                                  | 120 µg                                            |
| Niacin                                 | 72 µg                            |                                  | 359 µg                                            |
| Vitamin B <sub>6</sub>                 | 8 µg                             |                                  | 42 µg                                             |

**Note** It is recommended that follow-on formula contain a substance listed in Column 1 of the table in an amount that is not more than the amount (if any) specified for that substance in column 4 of the table. The amounts specified are Guidance Upper Levels and are recommended upper levels for nutrients which pose no significant risks on the basis of current scientific knowledge. These levels are values derived on the basis of meeting nutritional requirements of infants and an established history of apparent safe use. The Guidance Upper Levels should not be exceeded unless higher nutrient levels cannot be avoided due to high or variable contents in constituents of follow-on formula or due to technological reasons.

## S29—7 Optional nutritive substances in infant formula and special medical purpose product for infants

For subsection 2.9.1—9(1) and section 2.9.1—37, the table is set out below.

### Optional nutritive substances in infant formula and special medical purpose product for infants

| <b>Column 1</b>                                                                              | <b>Column 2</b>                  | <b>Column 3</b>                  |
|----------------------------------------------------------------------------------------------|----------------------------------|----------------------------------|
| <i>Substance</i>                                                                             | <i>Minimum amount per 100 kJ</i> | <i>Maximum amount per 100 kJ</i> |
| 2'-fucosyllactose permitted for use by Standard 1.5.2                                        |                                  | 96 mg                            |
| 3-fucosyllactose permitted for use by Standard 1.5.2                                         |                                  | 80 mg                            |
| 3'-sialyllactose sodium salt permitted for use by Standard 1.5.2                             |                                  | 8 mg                             |
| 6'-sialyllactose sodium salt permitted for use by Standard 1.5.2                             |                                  | 16 mg                            |
| A combination of 2'-fucosyllactose and difucosyllactose, permitted for use by Standard 1.5.2 |                                  | 96 mg                            |

| <b>Column 1</b>                                                                                                                      | <b>Column 2</b>                  | <b>Column 3</b>                                                 |
|--------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|-----------------------------------------------------------------|
| <i>Substance</i>                                                                                                                     | <i>Minimum amount per 100 kJ</i> | <i>Maximum amount per 100 kJ</i>                                |
| A combination of: 2'-fucosyllactose permitted for use by Standard 1.5.2; and lacto-N-neotetraose permitted for use by Standard 1.5.2 |                                  | 96 mg which contains not more than 24 mg of lacto-N-neotetraose |
| Adenosine-5'-monophosphate                                                                                                           |                                  | 0.36 mg                                                         |
| Cytidine-5'-monophosphate                                                                                                            |                                  | 0.6 mg                                                          |
| Guanosine-5'-monophosphate                                                                                                           |                                  | 0.4 mg                                                          |
| Inosine-5'-monophosphate                                                                                                             |                                  | 0.24 mg                                                         |
| Lactoferrin                                                                                                                          |                                  | 40 mg                                                           |
| lacto-N-tetraose permitted for use by Standard 1.5.2                                                                                 |                                  | 32 mg                                                           |
| Lutein                                                                                                                               | 1.5 µg                           | 5 µg                                                            |

| Taurine                                                                                                                              |                                  | 2.9 mg                                                          |
| Uridine-5'-monophosphate                                                                                                             |                                  | 0.42 mg                                                         |

## S29—8

### Optional nutritive substances in follow-on formula

For subsection 2.9.1—9(2), the table is set out below.

#### Optional nutritive substances in follow-on formula

| <b>Column 1</b>                                                                                                                      | <b>Column 2</b>                  | <b>Column 3</b>                                                 | <b>Column 4</b>                                   |
|--------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|-----------------------------------------------------------------|---------------------------------------------------|
| <i>Substance</i>                                                                                                                     | <i>Minimum amount per 100 kJ</i> | <i>Maximum amount per 100 kJ</i>                                | <i>Guidance upper level per 100 kJ (see Note)</i> |
| 2'-fucosyllactose permitted for use by Standard 1.5.2                                                                                |                                  | 96 mg                                                           |                                                   |
| 3-fucosyllactose permitted for use by Standard 1.5.2                                                                                 |                                  | 80 mg                                                           |                                                   |
| 3'-sialyllactose sodium salt permitted for use by Standard 1.5.2                                                                     |                                  | 8 mg                                                            |                                                   |
| 6'-sialyllactose sodium salt permitted for use by Standard 1.5.2                                                                     |                                  | 16 mg                                                           |                                                   |
| A combination of 2'-fucosyllactose and difucosyllactose, permitted for use by Standard 1.5.2                                         |                                  | 96 mg                                                           |                                                   |
| A combination of: 2'-fucosyllactose permitted for use by Standard 1.5.2; and lacto-N-neotetraose permitted for use by Standard 1.5.2 |                                  | 96 mg which contains not more than 24 mg of lacto-N-neotetraose |                                                   |
| Adenosine-5'-monophosphate                                                                                                           |                                  | 0.36 mg                                                         |                                                   |
| L-carnitine                                                                                                                          | 0.3 mg                           |                                                                 |                                                   |
| Choline                                                                                                                              |                                  |                                                                 | 12 mg                                             |

| <b>Column 1</b>                                             | <b>Column 2</b>                  | <b>Column 3</b>                  | <b>Column 4</b>                                   |
|-------------------------------------------------------------|----------------------------------|----------------------------------|---------------------------------------------------|
| <i>Substance</i>                                            | <i>Minimum amount per 100 kJ</i> | <i>Maximum amount per 100 kJ</i> | <i>Guidance upper level per 100 kJ (see Note)</i> |
| Cytidine-5'-monophosphate                                   |                                  | 0.6 mg                           |                                                   |
| Guanosine-5'-monophosphate                                  |                                  | 0.4 mg                           |                                                   |
| Inosine-5'-monophosphate                                    |                                  | 0.24 mg                          |                                                   |
| Lactoferrin                                                 |                                  | 40 mg                            |                                                   |
| lacto-N-tetraose permitted for use by Standard 1.5.2        |                                  | 32 mg                            |                                                   |
| Lutein                                                      | 1.5 µg                           | 5 µg                             |                                                   |
| Milk fat globule membrane-enriched whey protein concentrate | 0.14 g                           | 0.28 g                           |                                                   |
| Inositol                                                    |                                  |                                  | 10 mg                                             |
| Taurine                                                     |                                  | 2.9 mg                           |                                                   |
| Uridine-5'-monophosphate                                    |                                  | 0.42 mg                          |                                                   |

**Note** It is recommended that follow-on formula contain a substance listed in Column 1 of the table in an amount that is not more than the amount (if any) specified for that substance in Column 4 of the table. The amounts specified in Column 4 are Guidance Upper Levels and are recommended upper levels for nutrients which pose no significant risks on the basis of current scientific knowledge. These levels are values derived on the basis of meeting nutritional requirements of infants and an established history of apparent safe use. The Guidance Upper Levels should not be exceeded unless higher nutrient levels cannot be avoided due to high or variable contents in constituents of follow-on formula or due to technological reasons.

## **S29—9 Permitted forms of nutritive substances in infant formula products**

For paragraphs 2.9.1—10(b) and 2.9.1—38(b), the table is set out below.

### **Permitted forms for nutritive substances used in infant formula products**

| <b>Substance</b>                                                                                                                     | <b>Permitted forms</b>                    |
|--------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------|
| 2'-fucosyllactose permitted for use by Standard 1.5.2                                                                                | 2'-fucosyllactose                         |
| 3-fucosyllactose permitted for use by Standard 1.5.2                                                                                 | 3-fucosyllactose                          |
| 3'-sialyllactose sodium salt permitted for use by Standard 1.5.2                                                                     | 3'-sialyllactose sodium salt              |
| 6'-sialyllactose sodium salt permitted for use by Standard 1.5.2                                                                     | 6'-sialyllactose sodium salt              |
| A combination of 2'-fucosyllactose and difucosyllactose, permitted for use by Standard 1.5.2                                         | 2'-fucosyllactose and difucosyllactose    |
| A combination of: 2'-fucosyllactose permitted for use by Standard 1.5.2; and lacto-N-neotetraose permitted for use by Standard 1.5.2 | 2'-fucosyllactose and lacto-N-neotetraose |
| Adenosine-5'-monophosphate                                                                                                           | Adenosine-5'- monophosphate               |
| L-carnitine                                                                                                                          | L-carnitine<br>L-carnitine hydrochloride  |

| <b>Substance</b>                                            | <b>Permitted forms</b>                                             |
|-------------------------------------------------------------|--------------------------------------------------------------------|
|                                                             | L-carnitine tartrate                                               |
| Choline                                                     | Choline chloride                                                   |
|                                                             | Choline bitartrate                                                 |
|                                                             | Choline                                                            |
|                                                             | Choline citrate                                                    |
|                                                             | Choline hydrogen tartrate                                          |
| Cytidine-5'-monophosphate                                   | Cytidine-5'-monophosphate                                          |
| Guanosine-5'-monophosphate                                  | Guanosine-5'-monophosphate                                         |
|                                                             | Guanosine-5'-monophosphate sodium salt                             |
| Inosine-5'-monophosphate                                    | Inosine-5'-monophosphate                                           |
|                                                             | Inosine-5'-monophosphate sodium salt                               |
| Lactoferrin                                                 | Bovine lactoferrin                                                 |
| lacto-N-tetraose permitted for use by Standard 1.5.2        | lacto-N-tetraose                                                   |
| Lutein                                                      | Lutein from <i>Tagetes erecta</i> L.                               |
| Milk fat globule membrane-enriched whey protein concentrate | Bovine milk fat globule membrane-enriched whey protein concentrate |
| Inositol                                                    | Myo-inositol                                                       |
| Taurine                                                     | Taurine                                                            |
| Uridine-5'-monophosphate                                    | Uridine-5'-monophosphate sodium salt                               |

**Note** Section S29—23 lists the permitted forms of vitamins, minerals and electrolytes in infant formula products.

## S29—9A

### Infant formula products—conditions on use of permitted nutritive substances

The table for this section is as follows:

### Conditions of use for permitted nutritive substances

| Column 1                                                    | Column 2                                                           | Column 3                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------------------------------------------------|--------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Substance                                                   | Permitted Form                                                     | Conditions of use                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Lactoferrin                                                 | Bovine lactoferrin                                                 | <ol style="list-style-type: none"> <li>1. During the exclusive use period, may only be sold under the brand Synlait for *use as a nutritive substance in an infant formula product.</li> <li>2. For the purposes of condition 1 above, <b>exclusive use period</b> means the period commencing on the date of gazettal of the <i>Food Standards (Application A1253 – Bovine Lactoferrin in Infant Formula Products) Variation</i> and ending 15 months after that date.</li> </ol>                              |
| Milk fat globule membrane-enriched whey protein concentrate | Bovine milk fat globule membrane-enriched whey protein concentrate | <ol style="list-style-type: none"> <li>1. During the exclusive use period, may only be sold under the brand Lacprodan® MFGM-10 for *use as a nutritive substance in an infant formula product.</li> <li>2. For the purposes of condition 1 above, exclusive use period means the period commencing on the date of gazettal of the Food Standards (Application A1307 – Milk fat globule membrane as a nutritive substance in infant formula products) Variation and ending 15 months after that date.</li> </ol> |

### S29—10 Required format for a nutrition information statement

Article I. The table to this section is:

| NUTRITION INFORMATION                     |                                              |
|-------------------------------------------|----------------------------------------------|
|                                           | Average quantity per 100 mL prepared formula |
| Energy                                    | kJ                                           |
| Protein                                   | g                                            |
| — Whey*                                   | g                                            |
| — Casein*                                 | g                                            |
| Fat                                       | g                                            |
| — Long chain polyunsaturated fatty acids* |                                              |
| — Docosahexaenoic acid (DHA)*             | mg                                           |
| — Eicosapentaenoic acid (EPA)*            | mg                                           |
| — Arachidonic acid (ARA)*                 | mg                                           |
| Carbohydrate                              | g                                            |
| Vitamins                                  |                                              |

| Additional<br>(insert any other substance used as a nutritive substance; or inulin-type fructans and / or galacto-oligosaccharides, to be declared) | g, mg, µg                                    |

**Note:** \*See the following.

Entries and amounts for the following need only be included when stated in accordance with subsection 2.9.1—24(4), 2.9.1—24(5) and paragraph 2.9.1—25(6)(d): whey; casein; docosahexaenoic acid; eicosapentaenoic acid; arachidonic acid.

The heading 'Other nutrients' need only be included when required by subparagraph 2.9.1—25(2)(d)(ii) and paragraph 2.9.1—25(4)(a).

The heading 'Long chain polyunsaturated fatty acids' need only be included when required by paragraph 2.9.1—25(6)(a).

Entries and amounts for choline, inositol, L-carnitine are included under the heading 'Other nutrients' when required by paragraph 2.9.1—25(4)(a) and under the heading 'Additional' when required by paragraph 2.9.1—25(4)(b).

## S29—10A Example of a nutrition information statement including quantities expressed as sold

Article II. For subsection 2.9.1—25(7), an example nutrition information statement including information expressed in accordance with subsection 2.9.1—24(7) is:

Article III.

**S29—11 Food for infants—claims that can be made about vitamins and minerals added to cereal-based food for infants**

For section 2.9.2—10, the table is:

**Claims that can be made about vitamins and minerals added to cereal-based food for infants**

| <i><b>Vitamin or mineral</b></i> | <i><b>Maximum claim per serve</b></i> |
|----------------------------------|---------------------------------------|
| Thiamin (mg)                     | 15% RDI                               |
| Niacin (mg)                      | 15% RDI                               |
| Folate (µg)                      | 10% RDI                               |
| Vitamin B <sub>6</sub> (mg)      | 10% RDI                               |
| Vitamin C (mg)                   | 10% RDI                               |
| Magnesium (mg)                   | 15% RDI                               |

**S29—12 Formulated meal replacements—vitamins and minerals that must be present in formulated meal replacements**

- (1) For sections 2.9.3—3, 2.9.3—4 and 2.9.6—4, the table is set out below.
- (2) In the table, the amounts set out in columns 2 and 3 are for a 1-meal serving, and are expressed as a proportion of the RDI.

**Vitamins and minerals that must be present in formulated meal replacements**

| <b>Column 1</b>           | <b>Column 2</b>       | <b>Column 3</b>      |
|---------------------------|-----------------------|----------------------|
| <i>Vitamin or mineral</i> | <i>Maximum amount</i> | <i>Maximum claim</i> |
| Vitamin A                 | 300 µg (40%)          | 300 µg (40%)         |
| Thiamin                   | No amount set         | 0.55 mg (50%)        |
| Riboflavin                | No amount set         | 0.85 mg (50%)        |
| Niacin                    | No amount set         | 5 mg (50%)           |
| Folate                    | No amount set         | 100 µg (50%)         |
| Vitamin B <sub>6</sub>    | No amount set         | 0.8 mg (50%)         |
| Vitamin B <sub>12</sub>   | No amount set         | 1 µg (50%)           |
| Vitamin C                 | No amount set         | 20 mg (50%)          |
| Vitamin D                 | 5.0 µg (50%)          | 5 µg (50%)           |
| Vitamin E                 | No amount set         | 5 mg (50%)           |
| Calcium                   | No amount set         | 400 mg (50%)         |
| Iodine                    | 75 µg (50%)           | 75 µg (50%)          |
| Iron                      | No amount set         | 4.8 mg (40%)         |
| Magnesium                 | No amount set         | 160 mg (50%)         |
| Phosphorus                | No amount set         | 500 mg (50%)         |
| Zinc                      | No amount set         | 4.8 mg (40%)         |

**S29—13**

**Vitamins and minerals that may be added to formulated meal replacements**

- (1) For sections 2.9.3—3, 2.9.3—4 and 2.9.6—4, the table is set out below.
- (2) In the table, the amounts set out in columns 2 and 3 are for a 1-meal serving, and are expressed as a proportion of the \*ESADDI unless stated otherwise.

**Vitamins and minerals that may be added to formulated meal replacements**

| <b>Column 1</b>                  | <b>Column 2</b>              | <b>Column 3</b>             |
|----------------------------------|------------------------------|-----------------------------|
| <b><i>Vitamin or mineral</i></b> | <b><i>Maximum amount</i></b> | <b><i>Maximum claim</i></b> |
| Biotin                           | No amount set                | 5 µg (17%)                  |
| Pantothenic acid                 | No amount set                | 0.8 mg (17%)                |
| Vitamin K                        | No amount set                | 40 µg (50%)                 |
| Chromium:                        |                              |                             |
| <i>inorganic</i>                 | 34 µg (17%)                  | 34 µg (17%)                 |
| <i>organic</i>                   | 16 µg (8%)                   | no claim permitted          |
| Copper:                          |                              |                             |

|                  | L-tyrosine                             |
|                  | L-tryptophan                           |
|                  | L-valine                               |
|                  | L-arginine-L-aspartate                 |
|                  | L-lysine-L-aspartate                   |
|                  | L-lysine-L-glutamate                   |
|                  | N-acetyl-L-methionine                  |
|                  | L-carnitine                            |
| Choline          | L-carnitine hydrochloride              |
|                  | L-carnitine L-tartrate                 |
|                  | Choline                                |
|                  | Choline bitartrate                     |
|                  | Choline chloride                       |
| Inositol         | Choline citrate                        |
|                  | Choline hydrogen tartrate              |
|                  | Inositol                               |
| Nucleotides      | Adenosine-5'-monophosphate             |
|                  | Adenosine-5'-monophosphate sodium salt |
|                  | Cytidine-5'-monophosphate              |
|                  | Cytidine-5'-monophosphate sodium salt  |
|                  | Guanosine-5'-monophosphate             |
|                  | Guanosine-5'-monophosphate sodium salt |
|                  | Inosine-5'-monophosphate               |
|                  | Inosine-5'-monophosphate sodium salt   |
|                  | Uridine-5'-monophosphate               |
|                  | Uridine-5'-monophosphate sodium salt   |
| Taurine          | Taurine                                |

**S29—21      Amounts of nutrients for food for special medical purposes represented as a sole source of nutrition**

For section, 2.9.5—7, the table is:

**Amounts of nutrients for food for special medical purposes represented as a sole source of nutrition**

| <b>Column 1</b> | <b>Column 2</b>                        | <b>Column 3</b>                         |
|-----------------|----------------------------------------|-----------------------------------------|
| <i>Nutrient</i> | <i>Minimum amount per MJ</i>           | <i>Maximum amount per MJ</i>            |
| <b>Vitamins</b> |                                        |                                         |
| Vitamin A       | 84 µg retinol equivalents <sup>1</sup> | 430 µg retinol equivalents <sup>1</sup> |
| Thiamin         | 0.15 mg                                | No maximum set                          |
| Riboflavin      | 0.2 mg                                 | No maximum set                          |

| <b>Column 1</b>                                         | <b>Column 2</b>                                | <b>Column 3</b>              |
|---------------------------------------------------------|------------------------------------------------|------------------------------|
| <i>Nutrient</i>                                         | <i>Minimum amount per MJ</i>                   | <i>Maximum amount per MJ</i> |
| Niacin                                                  | 2.2 mg niacin equivalents <sup>2</sup>         | No maximum set               |
| Vitamin B <sub>6</sub>                                  | 0.2 mg                                         | 1.2 mg                       |
| Folate                                                  | 25 µg                                          | No maximum set               |
| Vitamin B <sub>12</sub>                                 | 0.17 µg                                        | No maximum set               |
| Vitamin C                                               | 5.4 mg                                         | No maximum set               |
| Vitamin D                                               |                                                |                              |
| (a) for products intended for children aged 1–10 years— | 1.2 µg                                         | 7.5 µg                       |
| (b) otherwise—                                          | 1.2 µg                                         | 6.5 µg                       |
| Vitamin E                                               | 1 mg alpha-tocopherol equivalents <sup>3</sup> | No maximum set               |
| Biotin                                                  | 1.8 µg                                         | No maximum set               |
| Pantothenic Acid                                        | 0.35 mg                                        | No maximum set               |
| Vitamin K                                               | 8.5 µg                                         | No maximum set               |
| <b>Minerals</b>                                         |                                                |                              |
| Calcium                                                 |                                                |                              |
| (a) for products intended for children aged 1–10 years— | 120 mg                                         | 600 mg                       |
| (b) otherwise—                                          | 84 mg                                          | 420 mg                       |
| Magnesium                                               | 18 mg                                          | No maximum set               |
| Iron                                                    | 1.2 mg                                         | No maximum set               |
| Phosphorus                                              | 72 mg                                          | No maximum set               |
| Zinc                                                    | 1.2 mg                                         | 3.6 mg                       |
| Manganese                                               | 0.12 mg                                        | 1.2 mg                       |
| Copper                                                  | 0.15 mg                                        | 1.25 mg                      |
| Iodine                                                  | 15.5 µg                                        | 84 µg                        |
| Chromium                                                | 3 µg                                           | No maximum set               |
| Molybdenum                                              | 7 µg                                           | No maximum set               |
| Selenium                                                | 6 µg                                           | 25 µg                        |
| <b>Electrolytes</b>                                     |                                                |                              |
| Sodium                                                  | 72 mg                                          | No maximum set               |
| Potassium                                               | 190 mg                                         | No maximum set               |
| Chloride                                                | 72 mg                                          | No maximum set               |

**Note 1** See paragraph 1.1.2—14(3)(a).

**Note 2** For niacin, add niacin and any niacin provided from the conversion of the amino acid tryptophan, using the conversion factor 1:60.

**Note 3** See paragraph 1.1.2—14(3)(c).

**Nutritional content requirements for a very low energy diet**

For paragraph 2.9.5—18(1)(f), the table is:

**Amounts of nutrients in a very low energy diet**

| <b>Column 1</b>         | <b>Column 2</b>                             |
|-------------------------|---------------------------------------------|
| <i>Nutrient</i>         | <i>Minimum amount per daily intake</i>      |
| <b>Vitamins</b>         |                                             |
| Vitamin A               | 600 µg retinol equivalents <sup>1</sup>     |
| Vitamin D               | 2.5 µg                                      |
| Vitamin E               | 10 mg α-tocopherol equivalents <sup>2</sup> |
| Vitamin C               | 30 mg                                       |
| Vitamin B <sub>6</sub>  | 2 mg                                        |
| Vitamin B <sub>12</sub> | 1 µg                                        |
| Niacin                  | 11 mg niacin equivalents <sup>3</sup>       |
| Riboflavin              | 1.2 mg                                      |
| Thiamin                 | 0.8 mg                                      |
| Folic Acid              | 200 µg                                      |
| <b>Minerals</b>         |                                             |
| Calcium                 | 500 mg                                      |
| Phosphorus              | 500 mg                                      |
| Iron                    | 16 mg                                       |
| Iodine                  | 140 µg                                      |
| Magnesium               | 350 mg                                      |
| Copper                  | 1.5 mg                                      |
| Zinc                    | 6 mg                                        |
| Potassium               | 1.6 g                                       |
| Sodium                  | 1 g                                         |

**Note 1** See paragraph 1.1.2—14(3)(a).

**Note 2** See paragraph 1.1.2—14(3)(c).

**Note 3** For niacin, add niacin and any niacin provided from the conversion of the amino acid tryptophan, using the conversion factor 1:60.

**Permitted forms of vitamins, minerals and electrolytes in infant formula products, food for infants, formulated meal replacements (vitamin K) and food for special medical purposes**

For sections 2.9.1—10(a), 2.9.1—38(a), 2.9.2—4, 2.9.2—5, 2.9.2—6, 2.9.3—3(2)(c)(iii) and 2.9.5—6, the table is:

**Permitted forms of vitamins, minerals and electrolytes in infant formula products, food for infants, formulated meal replacements (vitamin K) and food for special medical purposes**

| <b>Vitamin, mineral or electrolyte</b> | <b>Permitted forms</b>              |
|----------------------------------------|-------------------------------------|
| Vitamin A                              |                                     |
| <i>Retinol forms</i>                   | vitamin A (retinol)                 |
|                                        | vitamin A acetate (retinyl acetate) |

| <b><i>Vitamin, mineral or electrolyte</i></b> | <b><i>Permitted forms</i></b>                          |
|-----------------------------------------------|--------------------------------------------------------|
|                                               | vitamin A palmitate (retinyl palmitate)                |
|                                               | retinyl propionate                                     |
| <i>Provitamin A forms</i>                     | beta-carotene                                          |
| Vitamin C                                     | L-ascorbic acid                                        |
|                                               | L-ascorbyl palmitate                                   |
|                                               | calcium ascorbate                                      |
|                                               | potassium ascorbate                                    |
|                                               | sodium ascorbate                                       |

## Amendment History

The Amendment History provides information about each amendment to the Schedule. The information includes commencement or cessation information for relevant amendments.

These amendments are made under section 92 of the *Food Standards Australia New Zealand Act 1991* unless otherwise indicated. Amendments do not have a specific date for cessation unless indicated as such.

## About this compilation

This is compilation No. 17 of Schedule 29 as in force on **20 January 2026** (up to Amendment No. 247). It includes any commenced amendment affecting the compilation to that date.

Prepared by Food Standards Australia New Zealand on **20 January 2026**.

## Uncommenced amendments or provisions ceasing to have effect.

To assist stakeholders, the effect of any uncommenced amendments or provisions which will cease to have effect, may be reflected in the Schedule as shaded boxed text with the relevant commencement or cessation date. These amendments will be reflected in a compilation registered on the Federal Register of Legislation including or omitting those amendments and provided in the Amendment History once the date is passed.

The following abbreviations may be used in the table below:

|                                        |                |
|----------------------------------------|----------------|
| ad = added or inserted                 | am = amended   |
| exp = expired or ceased to have effect | rep = repealed |
| rs = repealed and substituted          |                |

**Schedule 29** was published in the Food Standards Gazette No. FSC96 on 10 April 2015 as part of Amendment 154 (F2015L00463 — 1 April 2015) and has since been amended as follows:

| Section affected | A'ment No. | FRL registration Gazette                                                                                       | Commencement (Cessation) | How affected | Description of amendment                                                                                 |
